Oracle AWR Performance Assessment Report

Automated Diagnostic Summary

CONFIDENTIAL — FOR AUTHORIZED DBA USE ONLY

Report ID	Snapshots	Interval
AWR-20260609-1734	—	60 min to

Executive Summary

During the 60-minute AWR window, EPIPPRDC (epipprdc) recorded a database health score of 76/100, classified as Medium risk. The primary workload constraint is a CPU Bottleneck, which should be addressed before the next peak business window. Application response times and batch throughput may degrade under sustained CPU pressure. Moderate risk warrants proactive tuning to avoid escalation. The assessment identified 1 critical rule-based finding(s) requiring DBA and application coordination. Snapshot: 60 min · AAS: 4.2 · Active sessions (avg): 4 Bottleneck: CPU Bottleneck (confidence 99%) — CPU Bottleneck (score 81). CPU utilization 37.5% with top wait profile indicating CPU-bound work. Core metrics: CPU 37.5% · Top wait CPU time (71.6% DB time) · Buffer busy 0.0% · Log file sync 0.3% · Top SQL 56ju14txudpxt (23.6% DB time) · Physical reads 7,579/sec · Buffer cache hit 90.0% Health score dimensions: - CPU Utilization: 37.5% utilization (dimension score 100/100) - Top Wait Event: CPU time (71.6% DB time) (dimension score 18/100) - Buffer Busy Waits: 0.0% of DB time (dimension score 100/100) - Log File Sync: 0.3% DB time (dimension score 100/100) - Top SQL Concentration: SQL_ID 56ju14txudpxt (23.6% DB time) (dimension score 81/100) - I/O Pressure: 7,579 physical reads/sec (dimension score 74/100) Rule engine: 2 findings (1 critical, 1 warning). Key signals: - [WAIT-001] Top wait 'CPU time' dominates at 71.6% of database time. - [SQL-002] SQL_ID 56ju14txudpxt elevated at 23.6% of database time.

Health Score Card

HEALTH SCORE	RISK CLASSIFICATION	DATABASE
76 /100	Medium	**EPIPPRDC** epipprdc

Risk Classification

Medium Risk

CPU Bottleneck (confidence 99.0%). CPU Bottleneck (score 81). CPU utilization 37.5% with top wait profile indicating CPU-bound work.

Oracle Rule Engine Findings

Severity	Rule	Finding	Recommendation
Red	WAIT-001	Top wait 'CPU time' dominates at 71.6% of database time.	Prioritize wait event analysis; correlate with top SQL and se
Amber	SQL-002	SQL_ID 56ju14txudpxt elevated at 23.6% of database time.	Profile SQL_ID 56ju14txudpxt with SQL Tuning Advisor and

Severity, finding, and recommendation from DBA rules (pre-AI).

Top Wait Event Analysis

Wait Event	% DB Time	Waits	Severity
CPU time	71.6%	—	**Critical**
db file sequential read	24.4%	—	Warning
read by other session	1.7%	—	Normal
db file scattered read	1.2%	—	Normal
db file parallel read	0.9%	—	Normal
direct path read	0.7%	—	Normal
log file sync	0.3%	—	Normal
cursor: pin S wait on X	0.2%	—	Normal
PGA memory operation	0.2%	—	Normal
kksfbc child completion	0.0%	—	Normal
latch: cache buffers chains	0.0%	—	Normal
Disk file operations I/O	0.0%	—	Normal
latch: shared pool	0.0%	—	Normal
SQL*Net more data to client	0.0%	—	Normal
library cache lock	0.0%	—	Normal
SQL*Net break/reset to client	0.0%	—	Normal
ASM IO for non-blocking poll	0.0%	—	Normal
CSS initialization	0.0%	—	Normal
SQL*Net message to client	0.0%	—	Normal
direct path write	0.0%	—	Normal
library cache: bucket mutex X	0.0%	—	Normal
SQL*Net more data from client	0.0%	—	Normal

library cache: mutex X	0.0%	—	Normal
CSS operation: query	0.0%	—	Normal
ASM file metadata operation	0.0%	—	Normal
cursor: mutex X	0.0%	—	Normal
library cache load lock	0.0%	—	Normal
CSS operation: action	0.0%	—	Normal
cursor: pin S	0.0%	—	Normal
cursor: mutex S	0.0%	—	Normal
row cache mutex	0.0%	—	Normal
Sync ASM rebalance	0.0%	—	Normal
control file sequential read	0.0%	—	Normal
enq: TX - index contention	0.0%	—	Normal
enq: DT - contention	0.0%	—	Normal
log file switch (private strand flush incomplete)	0.0%	—	Normal
latch: cache buffers lru chain	0.0%	—	Normal
enq: JG - queue lock	0.0%	—	Normal
asynch descriptor resize	0.0%	—	Normal
enq: KO - fast object checkpoint	0.0%	—	Normal
latch: In memory undo latch	0.0%	—	Normal

Wait events ranked by percentage of database time during snapshot window.

Top SQL Analysis

SQL ID	% DB Time	Executions	Elapsed (s)	Module
`56ju14txudpxt`	23.6%	—	—	—
`67ctg1dang636`	11.9%	—	—	—
`cstgy7s58z5fs`	8.3%	—	—	—

bnm4gqdxktg94	7.5%	—	—	—
dubsydpg9fyd1	5.2%	—	—	—
2dnbwc67y6zfb	3.5%	—	—	—
8z2d8mfn8hmck	3.4%	—	—	—
5252r76yv5wga	2.5%	—	—	—
d16b6h58vnkk9	2.5%	—	—	—
3vmxtsd7rdamv	2.2%	—	—	—

Recommendations

Priority	Recommendation
1	Prioritize wait event analysis; correlate with top SQL and session blocking chains.
2	Profile SQL_ID 56ju14txudpxt with SQL Tuning Advisor and plan stability checks.
3	Profile top CPU-consuming SQL and sessions; validate connection pool and batch job scheduling.
4	Prioritize deep dive on SQL_ID 56ju14txudpxt (23.6% of database time).
5	Correlate top wait 'CPU time' with ASH/AWR segment and SQL statistics for root-cause validation.
